Gfeller Joins K-State’s AMI, IMSE

Josh Gfeller, Manhattan, has joined the Kansas State University’s Advanced Manufacturing Institute (AMI) and industrial and manufacturing systems engineering (IMSE) department as network administrator. In this role Gfeller is responsible for maintaining and managing all information technology (IT) activities and functions for both enterprises.

Gfeller has five years of cross-platform experience in systems administration, including analyzing, maintaining, and repairing networks, hardware, software, and peripherals. Prior to his new position he was the system administrator at the Kansas State University Foundation. Gfeller received his Associates of Applied Science in information and network technology from Manhattan Area Technical College.

AMI provides business and engineering solutions for challenging industry problems for companies across the state, as well as supports K-State faculty in the development of technology based products and processes that have commercialization potential. The IMSE department is an ABET accredited program that prepares engineering students to design, analyze and improve production systems. The department currently has more than 200 undergraduate students, as well as a strong masters and doctoral program. In addition to teaching, IMSE faculty are actively engaged in research and recognized internationally for their work.
